**Ohmx Participation in Upcoming Conferences**

**Evanston IL, May 6<sup>th</sup> 2014** – Ohmx Corporation, an In-Vitro Diagnostics company developing the only comprehensive POC platform able to detect proteins, DNA, and small molecules, is pleased to announce its participation in upcoming conferences.

Ohmx will have representatives in attendance at:

- BIO International Convention*.....San Diego, CA- Jun. 23-26
- AACC 2014 Annual Meeting*.....Chicago, IL- Jul. 27-31
- iBIO Chicago Innovation Showcase*..... Chicago, IL- Aug. 5
- AACC Critical and POC Testing- International Symposium*.....San Diego, CA- Sep. 18-20
- AdvaMed 2014*.....Chicago, IL- Oct. 6-8

Ohmx will be presenting posters at both the AACC 2014 Annual Meeting and the Critical and POC Testing 25<sup>th</sup> International Symposium. It will also be giving Company Presentations at both the BIO International Convention and AdvaMed 2014. Additionally, Ohmx has entered the PROPEL Business Plan Competition, for which the finals will be held at the Chicago Innovation Showcase.

If attending any of these events, please take the opportunity to see its posters and presentations. Contact Ohmx to arrange for a meeting with one of its conference attendees to discuss Ohmx’s technology and current business strategy.

Ohmx would like to thank iBIO Institute’s PROPEL Center for their generous support.

---

**About the Company:**

Ohmx is an In-Vitro Diagnostics company that is developing a reliable, low-cost, comprehensive, point-of-care (POC) system that quantifies analytes from low-volume biological samples (e.g. whole blood, urine, semen, prostatic fluid, saliva etc). Ohmx’s market entry strategy is based on a portable blood analyzer to assist clinicians with screening, diagnosis, and monitoring of patients with chronic or accute diseases in the Physician Office Lab (POL) and Emergency Department (ED) setting respectively. The Ohmx POC device will also enable doctors to quickly and cost-effectively screen and manage preventive medicine for patients, in an effort to reduce the unsustainable inflation of healthcare costs. It is the only POC system that can provide quantitative analysis of proteins, small molecules, and DNA tests on one platform.
